

SANTIAGO CEBALLOS D.

FULLSTACK JUNIOR DEVELOPER

LANGUAGE

Spanish - native | English - A2

Hello, my name is Santiago. I'm a developer with experience in web and mobile development, complemented with graphic design skills. I have worked with technologies such as JavaScript, PHP, Node.js and PWA. In my previous position at Kubico SAS, I led a project that developed credimásApp, an application that reached more than 1000 downloads in its first month. I am committed to continuous learning, having obtained certifications in Modern JavaScript and FullStack Development. My passion for music and reading reflects my dedication to self-development and continuous enrichment. Professionally, I value accountability and punctuality, ensuring that each project is completed to the highest quality and within the agreed upon deadline.

PROJECTS

CredimasApp mobile application

description of activities

The activities required the creation of the front-end and development of hardware elements to optimize an attraction with a high impact on users, integration with enterprise applications and securing important customer data. With this application, the company achieved a 40% increase in customer interaction and a 20% increase in customer growth.

- PWA
- Front-end creation: Development of the user interface for the attraction, using HTML 5, CSS 3 , Bootstrap 5 and ECMA6+ JavaScript.
- Back-end creation: Development of the application logic with PHP 8.
- Management and creation of databases: Storage and organization of application data, using MySQL.
- hardware manipulation
- Customer data security: Implementation of security measures to protect customer data, such as encryption and authentication with JWT.
- Integration with other company applications: Connect the application with other company systems, such as CRM or ERP.

Super Personitas VR and CRM Method

description of activities - kubico S.A.S

In this project I helped in the creation of a virtual reality application for children with physical limitations, my project activity is to create a CRM to have a high degree of organization in terms of data of children, as with this 85% would determine the psychologists that activities or process would take with the superperson for optimal treatment, for this CRM I based on modern web design using as technologies, JWT, CSS3, Bootstrap 5, HTML3, Chart.js for creating graphics, PHP 8 and implementation of Power BI for a didactic dashboard.

Instant messaging application

description of activities - kubico SAS

Creation of a module for the management of messages with Chatbot, which is currently used by more than 5 applications at commercial level, managing on average more than 2 thousand customers each and sending more than 3.2 thousand messages per day, with a great impact on the commercial sector with customers this module was created under market standards for greater commercialization. All this under PHP 8, JavaScript Ecma6+, CSS 3, Bootstrap 5, MYSQL technologies.

Web application for a campaign for the mayor of medellin participant

description of activities - kubico SAS

Creation of dynamic website to provide information and register participants where in the first month we got 340 participants through the web portal, for my team I designed all the Font-end with Bootraps 5, CSS3, HTML5, JavaScript with implementation of microintearaciones along with this connect the API provided by my team working on the server side.

Augmented reality (AR) applications for customers

description of activities - Kubico SAS

In this project I participated in the realization of Back-end with node js 18TLS and php 8, with these languages completely connect the front-end and connection to the Augmented Reality API for a well known restaurant in Medellin and more customers to present their products in a new and more amazing way.

CRM module for MetaTalent

description of activities - Kubico SAS

With this project we attracted and managed customers and potential customers with an efficiency of 30% for the company, and thus have a great resource of very important information, my participation was the Front-end management and management of the database we need for this CRM and marketing of the same.

AR expiencie LandingPage

description of activities - Kubico SAS

In this project I created completely from start to finish the Front end of the AR page, for a better visualization of the company and the services they offer with microinteractions with the best possible quality and the current standard, for this project I used tailwindcss, HTML 5, CSS 3, JavaScript ECMA 6+, BEEM methodology, components, modulation.
